

The Four Moves

Three ways to change an ad, and one way to stack them.

Built on The Maggie hip belt script

Rule One variable at a time

The three moves

	Iteration	Use case swap	Angle swap
The rule	Same ad, new front door	Keep the reason. Change the moment	Keep the moment. Change the reason
What stays	Everything	The reason it works	The scene
What changes	The way in	Her situation	Why she was never fixed
Layers that move	0	2	2
Beats that move	1	5 to 6	8
New words to write	about 40	about 200	about 400
Named	ITE	NN	NN
Use it when	You have a winner and want more of it	You want a bigger audience for the same argument	The argument itself is tired
The result tells you	Which door they walk through	Which moment they live in	Whether they believe a different reason

Scaling is not a fourth move. It is the use case swap run three to five times with the angle locked. Same mechanics, done repeatedly, which is where volume comes from.

Which beats move 17 beats, 3 moves

Beat	Iteration	Use case swap	Angle swap
1 Hook	CHANGE	CHANGE	CHANGE
2 Credential	keep	keep	keep
3 Personal Crisis	keep	keep	keep
4 Pattern	keep	CHANGE	keep
6 Failed Attempts	keep	CHANGE	CHANGE

Beat	Iteration	Use case swap	Angle swap
6 The 2am search	keep	CHANGE	CHANGE
7 Low Point, at home	keep	keep	keep
7 Low Point, the situation	keep	CHANGE	keep
8 Bridge	keep	keep	CHANGE
10 Mechanism	keep	keep	CHANGE
12 Differentiation	keep	keep	CHANGE
13 Product	keep	keep	keep
18 Guarantee	keep	keep	keep
14 Results	keep	keep	keep
14 Resolution	keep	CHANGE	keep
17 CTA	keep	CHANGE	CHANGE
19 Echo Close	keep	CHANGE	CHANGE

The four phases 19 beats

Long form runs in four phases. Every beat belongs to one of them, and the phase tells you what that stretch of the ad is for.

Phase	Beats	Its job
Phase 1	Beats 1 to 4	Stop her and make her recognise herself
Phase 2	Beats 5 to 9	Break the old explanation
Phase 3	Beats 10 to 13	Give her the new one, then the product
Phase 4	Beats 14 to 19	Prove it and close

All 19 beats, in order 14 present - 5 absent

Your script runs 14 of the 19. Nothing is being skipped by accident. Five beats were never written, and two of those are the account structural gaps.

Phase	#	Beat	In your script	What it is	ITE	Use case	Angle
Phase 1	1	Hook	yes	The opening line	CHANGE	CHANGE	CHANGE

Phase	#	Beat	In your script	What it is	ITE	Use case	Angle
	2	Credential	yes	My name is Maggie. I'm 64	keep	keep	keep
	3	Personal Crisis	yes	The kerb. Her hip gave out	keep	keep	keep
	4	Pattern	yes	Car, chair, socks, the nights	keep	CHANGE	keep
Phase 2	5	Lies / Myths	ABSENT	Never used here. It is a sometimes beat	-	-	-
	6	Failed Attempts	yes x2	The verdict, then the 2am searches	keep	CHANGE	CHANGE
	7	Emotional Low Point	yes x2	John and the groceries, then the driveway	keep	CHANGE	keep
	8	Bridge / Discovery	yes	Denise arrives	keep	keep	CHANGE
	9	External Proof	ABSENT	No third party result. A real gap	-	-	-
Phase 3	10	Mechanism	yes	Tendons, blood supply, stuck loop	keep	keep	CHANGE
	11	Cheap Version Fails	ABSENT	Never answers "I can get that anywhere"	-	-	-
	12	Differentiation	yes	Not numbing, not masking, not loading	keep	keep	CHANGE
	13	Product Introduction	yes	The belt, four things at once	keep	keep	keep
Phase 4	14	Personal Results	yes	Twenty minutes, four hours, the socks	keep	CHANGE	keep
	15	Expert Validation	ABSENT	Structural gap 2. No expert reacts to the result	-	-	-
	16	Proof, Others	ABSENT	Structural gap 1. 289 reviews, none used	-	-	-
	17	CTA	yes	Try it yourself	keep	CHANGE	CHANGE
	18	Guarantee	yes	The 30 day promise. Placed early, before beat 14	keep	keep	keep

Phase	#	Beat	In your script	What it is	ITE	Use case	Angle
	19	Echo Close	yes	I wish someone had told me	keep	CHANGE	CHANGE

Why the tables in the other guides look out of order. They follow the order the beats appear in your script, not the numbers. Your script delivers the guarantee at beat 18 before the results at beat 14, because she says it as part of the story: "I only bought it because of the 30 day money back promise." That is deliberate and it is one of the reasons the ad works, so the number order and the reading order are not the same thing.

Which beats each move touches by number

Move	Beats it changes	Count
Iteration	1	1
Use case swap	1, 4, 6, 7, 14, 17, 19	7
Angle swap	1, 6, 8, 10, 12, 17, 19	7

Same count, completely different beats. Only two overlap: 1 and 19, the hook and the close, because those always follow whatever changed. Everything else is separate, which is what makes the two tests independent.

How to read it

- Beat 10 is the tell. It is the only row where the three moves genuinely separate. If the mechanism moved, you changed the angle. If it did not, you did not, whatever you called it.
- Beat 1 always moves. In all three. The hook is built out of whatever changed, so it can never stay still.
- Beats 2, 3, 13, 18 and 14 never move. The narrator, how it started, the product, the guarantee and the results. That is the spine.
- Count the changes to name the test. One beat is an iteration. Six is a new scene. Eight is a new argument. If you set out to change the angle and three beats moved, the angle did not really change.

The order you run them

- Prove something with an iteration. Cheapest test you will ever run.
- Widen it with use case swaps. This is where volume comes from.
- Keep going until three to five scenes work. That is scaling. Build the dedicated landing page, then raise budget.
- Run the winners in another bucket. UGC, then VSL. Exhaustion is per bucket, not per angle.

- Only then reach for an angle swap, when the argument itself stops producing.

You are between 2 and 3. One angle, five scenes mapped, two of them live.

The guides

Guide	Size	What it shows	Link
Hook Iteration	0 layers, 1 beat	Three doors into the same room	open
Use Case Swap	2 layers, 6 beats	The surgery countdown becomes the cortisone ladder	open
Angle Swap	2 layers, 8 beats	Wrong depth becomes the question nobody asked	open
Five Doors, One Angle	the same swap, five times	Scaling. The five scenes already in your script	open
Ad 03, The Sleep Ad	5 beats	One of the five, written out in full	open

One variable at a time, and count the beats to prove it.

The beat count is not a detail. It is the only honest way to know which test you actually ran.
