

Use Case Swap

Change the situation. Keep the reason it works.

Control Maggie, hip belt native article

Test The cortisone ladder

Moves 2 layers, 6 beats

The swap 9 layers

Layer	Control	Test	
ICP	Surgery Candidate	Painkiller Prisoner	CHANGE
Use Case	14 month wait for a hip replacement	Third cortisone injection, told there are not many left	CHANGE
Angle, belief shift	Bone is not the whole story, the tissue is starved and stuck	Identical	KEEP
Angle, emotion	Something irreversible is coming at me	Identical	KEEP
Awareness	Problem Aware	Problem Aware	KEEP
Bucket	Static	Static	KEEP
Format	Native article, long	Native article, long	KEEP
Length	Around 1,100 words	Within 10 percent	KEEP
Audience, budget, page, LP	-	Identical	KEEP

Two rows move. Everything else is copied across untouched. The ICP moves as a consequence of the scene, not as a second variable.

Beat by beat 6 change - 12 keep

Beat	In your script		Why	Sample
1 Hook	The 14 month wait, best thing that ever happened	CHANGE	Hook is built from the scene	"My surgeon told me I had two injections left. Then we talk about replacing it."
2 Credential	My name is Maggie, I'm 64	KEEP	Same woman	"My name is Maggie. I'm 64."
3 Personal Crisis	The kerb, 0 to 9, 6am	KEEP	How it started does not change	Word for word

Beat	In your script		Why	Sample
4 Pattern	Car, chair, bed, the sock, the nights	KEEP	Same losses, both women	"Sixty four years old and beaten by a sock."
6 Failed Attempts	Doctor, X ray, surgeon, waiting list	CHANGE	The scene. She is on the injection ladder, not the list	"The first one gave me four good months. The second gave me seven weeks."
7 Low Point	John doing the groceries	KEEP	Cost at home is the same	Word for word
7 Low Point	Crying in the driveway about the date	CHANGE	Same feeling, different trigger	"I was not crying about the pain. I was counting how many I had left."
6 Failed Attempts	2am googling, TENS, pillow, physio	CHANGE	Different fear, so different searches. Products stay	"How many cortisone injections can you have in one hip."
8 Bridge	Denise arrives	KEEP	The discovery is the angle	Word for word
10 Mechanism	Tendons, blood supply, stuck loop	KEEP	This is the control	Word for word
12 Differentiation	Not numbing, not masking, not loading	KEEP	Part of the mechanism, and cortisone is the strongest example of numbing	Word for word
13 Product Intro	The belt, four things at once	KEEP	Product does not change	Word for word
18 Guarantee	30 day money back, said by her	KEEP	Same risk reversal	Word for word
14 Results	Twenty minutes, four hours, kerb, socks	KEEP	Pays off Beat 4, which did not move	Word for word
14 Results	Hospital rings to confirm the date	CHANGE	No hospital call. The proof is the injection she cancels	"The clinic rang about booking number three. I told them I did not need it."
17 CTA	Dreading a date on a calendar	CHANGE	Names the wrong reader	"Counting how many injections you have left."
17 CTA	Try it yourself	KEEP	Soft close works at cold traffic	Word for word
19 Echo Close	I wish someone had told me eighteen months ago	CHANGE	Echoes the hook, so it moves with it	"I still have those two injections. I am never going to use them."

Beats 5, 9, 11, 15 and 16 are absent in this script and stay absent. Beats 15 and 16, an expert reacting to the result and proof from other customers, are the account's two biggest gaps. Adding them here would move two things at once.

Sample output the six that moved

Old on the left, new on the right. Every other beat is copied across untouched.

BEAT 1 - HOOK

CONTROL

The 14 month wait for my hip replacement turned out to be the best thing that ever happened to me, because by my surgery date I no longer needed it.

I still haven't told my surgeon that.

NEW

My surgeon told me I had two injections left in that hip.

After that, we talk about replacing it.

That was eight months ago.

I still have both of them.

And I'm never going to use them.

BEAT 6 - FAILED ATTEMPTS, THE VERDICT

CONTROL

When I went back, he sent me to an orthopaedic surgeon.

The surgeon looked at my scan for about ninety seconds. Pointed at the gap on the screen.

"It's bone on bone. We'll want to replace that."

And just like that, I was on a waiting list. Fourteen months.

NEW

When I went back, he sent me for a cortisone injection.

The first one was wonderful. Four good months. I honestly thought I had my life back.

The second one gave me seven weeks.

When I asked about a third, he told me there's a limit. You can't keep putting them in. After a certain point the only thing left is a replacement.

So that was the plan. Two more good stretches, if I was lucky. Then the operation.

BEAT 7 - EMOTIONAL LOW POINT

CONTROL

I drove home and cried in the driveway.

Not because of the surgery exactly. Because of the date.

There was now a date hanging over my whole life, and a 14 month countdown of pain to survive before it.

NEW

I sat in the car park afterwards and cried.

Not about the pain. I was used to the pain.

I was sitting there counting. Two left. Maybe a year of feeling normal, spread out in pieces.

And a date at the end of it that I never chose.

BEAT 6 - FAILED ATTEMPTS, THE 2AM SEARCH

CONTROL

Typing things like "hip pain can't sleep" and "bone on bone alternatives" and, on the dark nights, "how bad is hip replacement recovery."

NEW

Typing things like "hip pain can't sleep" and "how many cortisone injections can you have in one hip" and, on the dark nights, "how bad is hip replacement recovery."

BEAT 14 - PERSONAL RESULTS, THE RESOLUTION

CONTROL

By the time the hospital rang to confirm my surgery date, I sat there with the phone in my hand and realised I genuinely didn't want it anymore.

I think about what that 14 month wait nearly cost me.

NEW

A few weeks later the clinic rang about booking number three.

I sat there with the phone in my hand and realised I didn't want it.

Not because I was being brave. Because I didn't need it.

I think about what those two injections nearly cost me.

BEAT 17 AND 19 - CTA AND ECHO CLOSE

CONTROL

So if you're lying awake right now with that ache on the side of your hip, dreading a date on a calendar, I want you to know something.

I wish someone had told me eighteen months ago.

So now I'm telling you.

NEW

So if you're lying awake right now with that ache on the side of your hip, counting how many injections you have left, I want you to know something.

I still have those two injections sitting on my file somewhere.

I'm never going to use them.

I wish someone had told me eighteen months ago. So now I'm telling you.

Old script vs final script side by side

Struck through on the left is what came out. Underlined on the right is what went in. Anything unmarked is identical in both scripts.

1 - HOOK

CONTROL

The 14 month wait for my hip replacement turned out to be the best thing that ever happened to me, because by my surgery date I no longer needed it.

I still haven't told my surgeon that.

But if you're reading this with that deep ache in the side of your hip right now, you need to hear how I got here.

NEW

My surgeon told me I had two injections left in that hip.

After that, we talk about replacing it.

That was eight months ago.

I still have both of them.

And I'm never going to use them.

But if you're reading this with that deep ache in the side of your hip right now, you need to hear how I got here.

2 - CREDENTIAL

CONTROL

My name is Maggie.

I'm 64.

And eighteen months ago I honestly believed my life as I knew it was over.

NEW

My name is Maggie.

I'm 64.

And eighteen months ago I honestly believed my life as I knew it was over.

3 - PERSONAL CRISIS

CONTROL

It didn't start with a fall or an accident.

Just a dull soreness on the outside of my right hip that I was sure would go away on its own.

It didn't.

One morning I went to step off the kerb outside my house and my hip just gave out.

The pain jumped from 0 to 9 in a second.

I grabbed the fence so hard I scraped my palm, standing there in my dressing gown at 6am, thinking, what is happening to me.

After that day, the pain never really left.

It moved into my life like it owned the place.

NEW

After that day, the pain never really left.

It moved into my life like it owned the place.

4 - PATTERN

CONTROL

Getting out of the car became a project I had to plan.

I could barely walk, get up and down out of a chair, the bed or the toilet.

It was horrible.

I'll be honest about the thing that humiliated me the most.

I could no longer put my own socks on without wanting to scream.

Sixty four years old and beaten by a sock.

But the nights were the worst part.

The absolute worst.

I couldn't lie on my right side anymore.

The second my hip touched the mattress it felt like someone pressing their thumb into a deep bruise.

So I'd roll to my left.

Then my left would start.

I'd wake up and not be able to go back to sleep.

I'd lay there and toss and turn, sometimes for hours.

Most nights I gave up around 4:45 and just sat in the dark kitchen with a heat pack, waiting for the sky to go grey.

NEW

7 - LOW POINT, AT HOME

CONTROL

I used to be the one who organised everything.

Family gatherings.

Birthdays.

Now I was the woman in the car park doing the maths on whether I could make it to the shops and back without having to stop and hold onto something.

My husband John started doing the grocery runs without telling me, so I wouldn't feel like I had to come along.

I noticed.

I didn't say anything.

But it broke something in me.

NEW

I used to be the one who organised everything.

Family gatherings.

Birthdays.

My husband John started doing the grocery runs without telling me, so I wouldn't feel like I had to come along.

I noticed.

I didn't say anything.

But it broke something in me.

6 - FAILED ATTEMPTS, THE VERDICT

CONTROL

So I did what you're supposed to do.

I went to the doctor.

He pressed on my hip, sent me for an X-ray, and a week later gave me the verdict.

Osteoarthritis.

The cartilage was wearing thin.

"It's fairly common at your age, Maggie."

At your age.

I wanted to scream.

He gave me anti inflammatories that wrecked my stomach and barely touched the pain.

When I went back, he sent me to an orthopaedic surgeon.

The surgeon looked at my scan for about ninety seconds.

Pointed at the gap on the screen.

Said the words I'll never forget.

"It's bone on bone. We'll want to replace that."

And just like that, I was on a waiting list.

Fourteen months.

He offered me a cortisone injection to get me through until then.

NEW

So I did what you're supposed to do.

I went to the doctor.

He pressed on my hip, sent me for an X-ray, and a week later gave me the verdict.

Osteoarthritis.

The cartilage was wearing thin.

"It's fairly common at your age, Maggie."

At your age.

You can't keep putting them in.

After a certain point the only thing left is a replacement.

So that was the plan.

Two more good stretches, if I was lucky.

Then the operation.

7 - LOW POINT, THE COUNTING

CONTROL

I drove home and cried in the driveway.

Not because of the surgery exactly.

Because of the date.

There was now a date hanging over my whole life, and a 14 month countdown of pain to survive before it.

NEW

I sat in the car park afterwards and cried.

Not about the pain.

I was used to the pain.

I was sitting there counting.

Two left.

Maybe a year of feeling normal, spread out in pieces.

And a date at the end of it that I never chose.

6 - FAILED ATTEMPTS, THE 2AM SEARCH

CONTROL

That's when the 2am googling started.

If you've done it, you know exactly what I mean.

Phone screen too bright.

John asleep beside me.

Typing things like "hip pain can't sleep" and "bone on bone alternatives" and, on the dark nights, "how bad is hip replacement recovery."

I read everything.

I bought a TENS machine that did nothing.

I bought a special pillow.

I tried the physio exercises off the photocopied sheet, and I swear my hip got angrier, not better.

I was willing to try everything.

Stretches, tennis ball, over the counter meds, heat packs, physical therapy, anything to stop me wincing every time I stood up.

And still, nobody was answering the one question I actually had.

Why did this happen so fast, and is there anything that actually heals it instead of just numbing it.

NEW

Why did this happen so fast, and is there anything that actually heals it instead of just numbing it.

8 - BRIDGE

CONTROL

The answer came from the most unlikely place.

My sister in law, Denise.

A retired theatre nurse.

Sharp as a tack and not one for nonsense.

She came over for a cup of tea, watched me lever myself out of the armchair using both arms, and went quiet.

Then she said something that genuinely annoyed me at the time.

"Maggie, has anyone actually told you what's gone wrong in there, or did they just point at the bone?"

NEW

The answer came from the most unlikely place.

My sister in law, Denise.

A retired theatre nurse.

Sharp as a tack and not one for nonsense.

Then she said something that genuinely annoyed me at the time.

"Maggie, has anyone actually told you what's gone wrong in there, or did they just point at the bone?"

10 - MECHANISM

CONTROL

I said the surgeon told me.

Bone on bone.

And she said, "That's the joint. That's not why you can't sleep on your side. That's not why it stabs the second you stand up."

Then she explained the thing not one doctor had bothered to.

She said the sharp pain on the outside of the hip, the can't lie on it pain, very often isn't the cartilage at all.

It's the soft tissue around the joint.

The tendons that anchor the muscles to the outside of your hip.

She said as we get older, and especially for us women around menopause, those tendons lose their blood supply and their ability to repair themselves.

They get inflamed.

And then they get stuck in a loop where they simply stop healing.

Here's the part that made me sit up straight.

She said the reason the painkillers and the rest never worked was that none of them touched that.

They quieten the alarm.

They don't get fresh blood and repair into a starved tendon that has stopped fixing itself.

And you can't stretch your way out of it either, because loading an angry tendon just inflames it more.

Which explained, finally, why that physio sheet made everything worse.

For the first time in months, something actually made sense.

The problem wasn't only a worn out joint waiting for the scalpel.

The problem was tissue that had been starved of circulation and left stuck in inflammation, and nothing I'd tried was bringing it back to life.

NEW

I said the surgeon told me.

Bone on bone.

And she said, "That's the joint. That's not why you can't sleep on your side. That's not why it stabs the second you stand up."

Then she explained the thing not one doctor had bothered to.

The problem wasn't only a worn out joint waiting for the scalpel.

The problem was tissue that had been starved of circulation and left stuck in inflammation, and nothing I'd tried was bringing it back to life.

12 - DIFFERENTIATION

CONTROL

So I went looking for the opposite of everything I'd been doing.

Not numbing.

Not masking.

Not loading it.

Something that would actually drive warmth and blood and repair into that exact spot.

NEW

So I went looking for the opposite of everything I'd been doing.

Not numbing.

Not masking.

Not loading it.

Something that would actually drive warmth and blood and repair into that exact spot.

13 - PRODUCT INTRODUCTION

CONTROL

What I found was a therapy belt that wraps right around the hip and does four things at once.

Red and near infrared light that sinks down into the tissue.

Gentle heat.

A soft vibration massage.

And a light compression that holds it all exactly where the pain lives.

NEW

What I found was a therapy belt that wraps right around the hip and does four things at once.

Red and near infrared light that sinks down into the tissue.

Gentle heat.

A soft vibration massage.

And a light compression that holds it all exactly where the pain lives.

18 - GUARANTEE

CONTROL

I'll be honest with you.

After everything that had failed, I expected nothing.

I only bought it because it came with a 30 day money back promise, so I figured I could send it back and feel smug about it.

NEW

I'll be honest with you.

After everything that had failed, I expected nothing.

I only bought it because it came with a 30 day money back promise, so I figured I could send it back and feel smug about it.

14 - PERSONAL RESULTS

CONTROL

The first night I used it for twenty minutes in my armchair while the news was on.

The warmth alone was the nicest my hip had felt in a year.

I went to bed thinking, well, at least that was pleasant.

I slept four hours on my right side.

The side I had not slept on in over a year.

I cried again.

A very different reason this time.

I won't pretend it was instant magic.

It wasn't.

But over the next few weeks, twenty minutes a day, the change was undeniable.

The morning stiffness got shorter.

The stab when I stepped off the kerb softened to a murmur, then most days, to nothing.

I got down on the floor with my granddaughter and got back up without the two armed push up off the couch.

I put my own socks on one morning and didn't even think about it until I was halfway out the door.

NEW

14 - PERSONAL RESULTS, THE RESOLUTION

CONTROL

By the time the hospital rang to confirm my surgery date, I sat there with the phone in my hand and realised I genuinely didn't want it anymore.

I think about what that 14 month wait nearly cost me.

Not the operation.

The mornings with my grandkids I was too sore to enjoy.

The walks with John I kept saying no to.

The nights of sleep I will never get back.

That's the part that still gets me.

Not the pain.

The lost time.

NEW

A few weeks later the clinic rang about booking number three.

I sat there with the phone in my hand and realised I didn't want it.

Not because I was being brave.

Because I didn't need it.

I think about what those two injections nearly cost me.

Not the operation.

The mornings with my grandkids I was too sore to enjoy.

The walks with John I kept saying no to.

The nights of sleep I will never get back.

That's the part that still gets me.

Not the pain.

The lost time.

17 - CTA

CONTROL

I'm not a doctor.

I'm just a woman who was handed a date and a countdown, and stumbled onto the thing nobody had explained to me.

So if you're lying awake right now with that ache on the side of your hip, dreading a date on a calendar, I want you to know something.

The bone might not be the whole story.

There may be something starved and inflamed around that joint that nobody has properly looked at, and it may not be as finished as you have been told.

NEW

I'm not a doctor.

I'm just a woman who was handed a limit and a countdown, and stumbled onto the thing nobody had explained to me.

So if you're lying awake right now with that ache on the side of your hip, counting how many injections you have left, I want you to know something.

The bone might not be the whole story.

There may be something starved and inflamed around that joint that nobody has properly looked at, and it may not be as finished as you have been told.

19 - ECHO CLOSE

CONTROL

I wish someone had told me eighteen months ago.

So now I'm telling you.

Try it yourself.

NEW

I still have those two injections sitting on my file somewhere.

I'm never going to use them.

I wish someone had told me eighteen months ago.

So now I'm telling you.

Try it yourself.

The image one per script

Every image in this account so far is text on a plain background. Zero symptom images have ever run, despite the copy handing over the sock, the letter, the heat pack. So each direction below is untested here. One image per script, no backups, no options. The method's own rule: show the most interesting concrete thing in the script. Never an idea, never a text overlay, and on cold traffic never the product, because the belt has not been earned yet.

The rule. The image comes from whatever the hook names. Not from the use case as a category, not from the pain point as a category. From the hook. That is why the method says finish the headline first: a changed headline voids its image direction.

If the hook names	The image comes from	Beat
The situation she is in	The use case	1 and 6
A thing she can no longer do	The pain point	4
Why the last treatment failed	The explanation	10
A number or a result	The proof	14
The offer or the price	The product	13

The gate that overrules it. Awareness. If the two disagree, awareness wins. Problem aware and cold: the use case or the pain point, and never the product because it has not been earned. Solution aware: the explanation, the diagram, the depth. Most aware: the product and the offer, never a symptom. Every script on this page is problem aware, so the belt never appears.

The pattern, four steps. 1. Read the hook. 2. Circle every noun you could photograph. 3. If there is more than one, take the most specific and the least expected. 4. That noun is the image, alone in the frame, nothing else.

Hook	The noun it sticks to	Source
"I was on a waiting list. Fourteen months."	the waiting list	Use case
"I had two injections left in that hip."	the injections	Use case
"Eleven minutes, holding a sock."	the sock	Pain point
"Looked at my scan for about ninety seconds."	the scan	Use case
"Sat in the dark kitchen with a heat pack."	the heat pack	Pain point

Two tests before you shoot. The swap test: could this image sit on any other ad in the category? If yes, it is not specific enough, go back to step 3. The loop test: does the image answer the question or ask it? It has to ask. An image that gives away the ending kills the reason to read.

Script	The line it comes from	The image	Level	Hypothesis
Control surgery countdown	"And just like that, I was on a waiting list. Fourteen months."	The hospital letter, still in its envelope, sitting unopened on the kitchen bench. A pen beside it. The date is visible as a shape but not readable. No hands, no face, no product.	1	She has that exact envelope in her own house. If the object stops her before she reads a word, photography works on this account and every future ad gets a concrete image instead of a text card. Read it on click through rate first, then CPA.
Test cortisone ladder	"My surgeon told me I had two injections left in that hip."	A clinic treatment card lying flat on a bench. Three injection dates printed on it, the first two crossed off in pen, the third blank. Nothing else in frame. No needle, no vial, no arm.	1	The countdown is the emotion of the whole ad, and this card carries it in one glance without a single word. If it beats the text card, the scene is landing before the copy starts. Expect it to pull a different reader than the surgery letter, because she has not been offered an operation yet.

Run the image test before the copy tests. Same winning ad, same headline, text card against the concrete photo. That is one clean variable and it answers the biggest open question in the account. Then run the copy tests on whichever image style won. If you change the image and the copy in the same round, you will not know which one moved the number.

KTA act on these

- Write the use case as a name plus a scene, in one line. If you cannot picture the room, it is a segment, not a use case.
- Choose the new scene by the feeling, not the topic. Same emotion, different situation. That is what keeps the test clean.
- Freeze the belief shift word for word. Beats 8, 10, 12 and 13 are copy and paste. They are the control.
- Expect five to six beats to move, not two. The scene runs through the hook, the failed attempts, the low point, the searches, the proof and the close.
- Do not fix other gaps while you are here. One variable.
- Name it NN, not ITE. A new scene is a new concept.
- Judge on CPA. Not reactions, not comments.

Keep the reason it works. Change the moment it happens in.

Everything that is her situation moves. Everything that is why the product works stays.

Guide 01 of 3. Next: Angle Swap, same scene and a new belief shift. Then Iteration, same scene and angle with a new door in.
